Interplex Medical Recognized for Excellence in New Product Development

Milford, OH. – May 5, 2011 - Interplex Medical, LLC, a globally recognized developer and manufacturer of medical devices for OEM customers, has been designated as a recipient of a 2011 Manny Award, an award given each year by Cincy Magazine to entities exemplifying excellence in manufacturing in the highly industrialized Ohio, Indiana and Kentucky Tri-State Area. Cincy Magazine, a publication for business professionals, named Interplex Medical as one of only three companies to be recognized for performance in the new product development category.

Interplex Medical is an ISO 13485, FDA registered company that focuses exclusively on medical industry, commercial clients. The company offers support in all developmental areas from product conceptualization and design, to seamless transition to high volume manufacturing. Interplex engineering and manufacturing teams have demonstrated expertise working with products intended for a wide variety of clinical applications and are known globally for achievements with minimally invasive catheter based devices, including those used for stent delivery.

“Much of our past success can be attributed to our company’s highly efficient product and process development” said Matt Otten, vice president of business development. “Our company was built around processes that enable us to remain agile while developing products in an environment of strict adherence to quality system requirements mandated by federal regulatory bodies.” Additional information regarding the company can be found at www.interplexmedical.com

The ceremony officially recognizing this year’s Manny Award recipients will be held on June 6th at Xavier University Cintas Center.

Interplex Medical is a division of Interplex Industries, Inc. Founded in 1958, Interplex Industries is headquartered in College Point, NY. The company continues to expand its technology and capabilities in the areas of product design and application development services, metal etching, prototyping, tool design and build, precision metal stamping, die casting, precision machining, plating and finishing, insert and injection molding, assembly and full scale automation services around the world. Interplex currently provides its services to the communications, electronics, industrial, medical and automotive markets and has facilities in the United States, Mexico, China, Singapore, India, Malaysia, Korea, Scotland, France, Germany and Hungary.
